West Virginia Christmas Tree Growers Association Since 1954

Growing and marketing high quality products for your family and the consuming public. The operators of the Association's member farms are true stewards of the land and grow "Real" trees to help in the conservation and improvement of our natural resources.

Contributions from the WV Christmas Tree Growers Association help make this publication possible.

2022 "CHOOSE-AND-CUT" CHRISTMAS TREE FARMS

Selecting a West Virginia-Grown Christmas Tree is the Environmentally Sound Choice

- Do you want the perfect Christmas tree for the holidays?
- Do you want to make sound decisions when it comes to the environment?

Then travel to one of the many choose-and-cut Christmas tree farms, where holiday traditions and environmental stewardship go hand in hand. Our tree farms grow a wide selection and variety of high-quality trees that bring the beauty and aroma of the forest to your home.

While growing on these farms, Christmas trees stabilize the soil, protect water quality, and provide cover for wildlife. Growing Christmas trees absorb carbon dioxide while emitting fresh oxygen. They also beautify the landscape with their classic shape and lush foliage – something not found on artificial trees. Best of all, they can be easily recycled after the holiday.

Gather up your family and friends and get out there! Your perfect Christmas tree awaits at one of West Virginia's choose-and-cut Christmas tree farms.

Keeping Your Christmas Tree Fresh Through the Holiday Season

Nothing beats the smell of a fresh Christmas tree, but fresh trees need special attention. To keep your tree fresh and beautiful when you get home, as well as to lessen the risk that your tree will become a fire hazard, follow these simple tips:

1. Cut at least one inch off the main stem, place the tree in a clean pail of warm water and put it in a cool, shaded area where it is protected from the wind and the sun.
2. When ready to bring the tree into your home, make another cut of at least one inch off the main stem and place the tree into a water-filled stand as quickly as possible. A bucket of sand and water may also be used in place of a stand. It is always important to maintain a suitable water level .
3. Trim the tree in all its finery, sit back and enjoy your creation throughout the holiday season.
4. Dispose of your tree properly as soon as the holiday season is over. Never attempt to burn a live Christmas tree in a fireplace or wood stove. This can be very dangerous.

Fresh pines and firs will hold their needles for several weeks when treated in this fashion. Spruces will hold their needles for at least two weeks.

To be assured that you get the tree you want, please call the farm before making the trip.

worn by all non-vaccinated customers. If you have a cough, fever, etc., please consider having friends or family members come pick up your tree.

Thanks and Be Safe!

Christmas Tree Safety

- Buy locally grown Christmas trees if possible. Bounce and shake the tree. Pull the needles. If the needles fall, the tree is not fresh.
- Just before the Christmas tree is placed in the tree stand, make a slanting cut an inch or two up the trunk from where the tree was originally cut. Removing this lower inch or two will produce a fresh, clean surface that will allow the tree to absorb water easily.
- Keep the base of the tree under water at all times. A Christmas tree may use a quart of water a day, so keep a close watch on the water supply.
- Certain other precautions should be taken to ensure a safe Christmas. All lights should be inspected for faulty wiring and sockets. If any defect is found, the set should be discarded. Only light sets carrying the Underwriters Laboratory safety seal should be used. Other sets may be dangerous.
- Keep all flammable decorations, such as paper or cotton, away from the Christmas tree. Angel hair, snow spray, and white plastic foam are common decorations on Christmas trees. When used separately, angel hair and snow spray are essentially safe. But the National Fire Protection Association reports that when snow spray is used on angel hair, the combination is so flammable that just a touch of fire will cause it to burst into flame. While plastic foam may appear to be fireproof, it may burn if ignited by a spark.
- Artificial trees may be dangerous, too. Never string lights on a metal tree. A short circuit may easily electrify the tree and cause serious injury to anyone coming in contact with it. Colored spotlights should be used to illuminate this type of Christmas tree.

WV Division of Forestry Our Mission

The West Virginia Division of Forestry is committed to protecting, nurturing, and promoting the wise utilization and thus the sustainability of our state's forest resources.

Our Programs:

Fire Protection: Responsible for protecting nearly 12 million acres of state and privately-owned forestland across West Virginia from wildfire.

Investigative Unit: Investigates all violations of the state's fire laws and enforces violations of the Logging Sediment Control Act of 1992.

Water Quality: Issues licenses to anyone who buys timber or logs for resale or who harvests timber within the state and provides training and certification for loggers in accordance with the Logging Sediment Control Act.

Managed Timberland: Promotes sustainable forestry within the state by providing a formula-based method of taxation for forestland.

Forest Management: Provides cooperative forest management programs for private nonindustrial forest landowners to promote sustainable forestry practices. Also, regulates the digging of ginseng, manages seven state forests.

Urban and Community Forestry: Helps municipalities throughout the state establish long-term tree care programs
